Atty. Docket No.: JD-327-US

IN THE CLAIMS

Please amend the Claims as follows:

1. (Currently Amended) An apparatus for supporting a hand held liquid dispensing device comprising:

a first support member for receiving a nozzle portion of the dispensing device; and

a second support member for holding a container, the first and second support members being spaced from each other in substantial axial alignment and connected to a frame member for connection to a supporting structure[.], the first support member constructed and arranged to facilitate the filling of the container when the nozzle portion is placed in the first support member and a container is placed on the second support member.

2. (Original) The apparatus as defined in Claim 1 wherein the first support member includes a cavity.

3. (Original) The apparatus as defined in Claim 1 wherein the second support member is pivotably connected to the frame member.

4. (Currently Amended) The apparatus as defined in Claim 1 wherein there are two oppositely disposed of said first support members, oppositely disposed, connected to the frame member.

5. (Original) The apparatus as defined in Claim 1 wherein the first support member is defined by a platform having a cavity for placement of a dispenser nozzle therein.

6. (Original) The apparatus as defined in Claim 1 wherein the second support member is defined by a foot portion, the foot portion supported by the frame and pivotally connected to the frame member.

7. (Original) The apparatus as defined in Claim 6 wherein the foot portion includes a concave portion for receiving a bottle.

8. (Currently Amended) The apparatus as defined in Claim 1 wherein there are two oppositely disposed of said second support members, oppositely disposed, connected to the frame member, the frame member defined by a first portion extending in a first direction and a second portion extending essentially at right angles to the first portion, the second portion connected to the two oppositely disposed second support members.

9. (Original) The apparatus as defined in Claim 8 wherein the frame member is composed of rod members.

10. (Original) The apparatus as defined in Claim 1 wherein the cavity includes a passage constructed and arranged to permit passage of the nozzle portion therethrough.

11. (Currently Amended) A combined hand held liquid dispensing device and apparatus for supporting the device comprising:
a liquid dispensing device;
a first support member receiving a nozzle portion of the dispensing device; and
a second support member for holding a container, the first and second support members being spaced from each other in substantial axial alignment and connected to a frame member for connection to a supporting structure[.], the first support member constructed and arranged to facilitate the filling of the container when the nozzle portion is placed in the first support member and a container is placed on the second support member.

12. (Original) The apparatus as defined in Claim 11 wherein the first support member includes a cavity.

13. (Original) The apparatus as defined in Claim 11 wherein the second support member is pivotably connected to the frame member.

14. (Original) The apparatus as defined in Claim 11 wherein there are two oppositely disposed first support members connected to the frame member.

15. (Original) The apparatus as defined in Claim 11 wherein the first support member is defined by a platform having a cavity for placement of a dispenser nozzle therein.

16. (Original) The apparatus as defined in Claim 11 wherein the second support member is defined by a foot portion, the foot portion supported by the frame and pivotally connected to the frame member.

17. (Original) The apparatus as defined in Claim 16 wherein the foot portion includes a concave portion for receiving a bottle.

18. (Currently Amended) The apparatus as defined in Claim 11 wherein there are two oppositely disposed of said second support members, oppositely disposed, connected to the frame member, the frame member defined by a first portion extending in a first direction and a second portion extending essentially at right angles to the first portion, the second portion connected to the two oppositely disposed second support members.

19. (Original) The apparatus as defined in Claim 18 wherein the frame member is composed of rod members.

20. (Original) The apparatus as defined in Claim 11 wherein the cavity includes a passage constructed and arranged to permit passage of the nozzle portion therethrough.
